

Bioweed™ Herbicide

For selective broadleaf weed control.

Long term solution for selective broadleaf control

BIOWEED™ IS AN EFFECTIVE KNOCKDOWN HERBICIDE FOR CONTROL OF BROADLEAF WEEDS IN PASTURE AND INTER-ROWS.

- Reduces long term weed pressure by eradicating broadleaf seeds;
 - on the plant
 - on the soil surface
 - within the soil horizon
- Maintains your soil health. Zero residue, does NOT harm soil biology
- ZERO withholding or re-entry period
- Non-systemic
- Non-hormonal
- Contact only herbicide (does not translocate)
- Improved crop, operator and environmental safety
- Organically certified with NASAA and BFA

“AORMA Certified Organic Producers agree BioWeed™ is an excellent product for controlling broadleaf in pastures.”

Dr Brice Douglas
Founder of Australia Organic Red Meat Association, AORMA.

WEED CONTROL ACTIVITY OF BIOWEED™ COMPARED TO CONVENTIONAL HERBICIDES.

Three months after application of BioWeed™ Herbicide.

Effective control of the targeted weed seed bank means no further herbicide applications are required.

Three months after application of conventional selective broadleaf control.

Lack of weed seed bank control demonstrates need for continuous herbicide spraying and ongoing costs.

Selective Broadleaf Weed Control

HOW DOES BIOWEED™ HERBICIDE TARGET BROADLEAF WEEDS?

Applying BioWeed™ at recommended rates, will kill broadleaf weeds and their seeds with minimal effect on surrounding grasses**.

As grasses regenerate from the tiller base, removing the broadleaf seed bank provides a window of opportunity for grasses to establish as the dominant cover crop.

BioWeed™ offers genuine broadleaf eradication rather than yearly suppression.

WHICH BROADLEAF WEEDS CAN I TARGET WITH BIOWEED™ HERBICIDE?

All broadleaf weeds including:

- Paterson's Curse
- Capeweed
- Ragwort
- Thistle

APPLICATION RATES FOR BROADLEAF CONTROL.

** When applied at higher rates, BioWeed™ acts as a general knockdown and pre-emergent herbicide. The lower application rates outlined on this flier are for SELECTIVE broadleaf control only.

Use pattern	Rate	Pressure	Speed	Nozzles	IMPORTANT
Motor driven Inter-row or Boom Sprayer	60 litres per sprayed hectare (in 540 litres water)	5 bar	4 km/hr	Tee Jet AI9504EVS red AIUB8504 red	<ul style="list-style-type: none"> • Ensure 3 hours rain free following application • DO NOT mix ANY surfactants or spreader-stickers with BioWeed™ Herbicide for this use pattern • For accurate and effective spraying use the correct nozzles
Knapsack or Hand Wand	10% by total spray volume	Maximum achievable	N/A	TG 2 or Adjust nozzle to medium flow
